

Key Points Lesson 5

When you begin a new paragraph or a sentence in a numbered list, begin in the 3rd cell (push your space bar 2 times before you begin).

Alphabetic wordsigns are made with 23 of 26 letters of the alphabet. When they stand alone, rather than being letters, they are words. There are three letters: *a*, *i*, and *o* that can be used as words, so they do not have an alphabetic wordsign. Here is a list of the 23 alphabetic wordsigns.
